***Allowable Subject Matter***

1. Claims 1-17, 19-42, and 44-51 are allowed.

Independent claims 1 and 27 recite "...a thresholder adapted to threshold the given portion, wherein the rate controller determines whether the given portion should be requantized and whether the given portion should be thresholded based at least in part on at least one of the statistics about the given portion; and an encoder adapted to compress the frame, wherein the compressed size of the frame is approximately the same as a target size; wherein the rate controller is further adapted to determine a target number (NTHRESH) of levels to set to zero by thresholding; wherein the thresholder is adapted to determine the number of levels (CNT) beneath a threshold function having a predetermined width and height profile, responsive to the number of levels (CNT) beneath the threshold function being within a predetermined range of the target number (NTHRESH), the thresholder sets the magnitude of the levels beneath the threshold function to zero, and responsive to the number of levels (CNT) beneath the threshold function being outside of the predetermined range of the target number (NTHRESH) the thresholder adjusts the threshold function..." which are features that are not anticipated nor obvious over the art of record. Dependent claims 2-17, 19-26, 28-42, 44-51 are allowable for the reasons concerning the independent claims.
